

embWiSe announces support for MontaVista's Mobilinux 4.0 OS

Chennai, India - December 23, 2005

embWiSe Technologies, today announced the support of their SDIOWorx , SD/MMC/SDIO software stack on MontaVista's Mobilinux 4.0 OS platform.

Currently supported on Intel PXA270 Host platform, the SDIOWorx package for Mobilinux 4.0 comes complete with the stack/Bus driver and drivers for the Host Controller, SD/MMC memory cards, SDIO-Bluetooth (Type A) and SDIO-WiFi.

“MontaVista is the clear leader and the vendor of choice with their Linux initiative for mobile phones/devices and with SD/SDIO already a defacto interface standard in mobile devices for storage and peripheral chipsets/devices like WLAN, DVB, etc., we are confident of adding value to the mobile device vendors with our SDIOWorx stack support for Mobilinux 4.0 “ said G.Srinivasan, Managing Director of embWiSe.

“Our Mobilinux SDIOWorx stack solution with the 802.11b/g driver support for leading WLAN chipset/cards, is a key differentiator and offers a compelling value proposition to the Mobile device vendors compared to our competitors' Linux SDIO stack ” said Alagu Sankar ,CTO of embWiSe.

embWiSe is a third party ISV partner of MontaVista and a partner of the Mobilinux Open Framework .embWiSe already supports their SDIOWorx under MontaVista's CEE 3.1 Linux OS version on Intel PXA270 platform.
